PROFESSIONAL PROFILE

Civil Engineering in Computing and Informatics student with coursework completed and thesis pending, focused on Software, Backend, and Cloud Engineering. Experience in enterprise automation and projects involving REST APIs, serverless systems, and infrastructure as code using Python, TypeScript/Node.js, Go, PostgreSQL, AWS, Terraform, and Docker. English C1.

EDUCATION AND CERTIFICATION

Universidad Mayor **2022 - 2026**

Civil Engineering in Computing and Informatics - Coursework completed; thesis pending

- AWS Certified Solutions Architect - Associate (SAA-C03) - Earned November 2026

PROFESSIONAL EXPERIENCE

Nestlé Chile - Digital & New Tech **2025**

Professional Internship - Digital & New Tech (February to July 2025)

- Contributed to digital solutions and process automation for HR, SH&E, NDC, and technical teams using Python, SQL, Power Platform, SharePoint, and Microsoft 365.
- Python desktop application: built a controlled interface for HR self-service kiosks that replaced the Windows taskbar and centralized employee login, session management, and HR services; packaged it with PyInstaller and configured automatic startup.
- SH&E access control: developed and deployed an application to verify contractor inductions and track check-ins and check-outs, with RUT validation, record retrieval and auto-fill, and periodic email reports.
- Onboarding: built a task management application from scratch for a 20-person team, supporting assignment, progress tracking, completion evidence, feedback, managerial oversight, and deadline-based notifications.
- Annual performance evaluation: developed an application with feedback forms, role-based workflows derived from organizational hierarchy data, and automated reminders for a process designed to reach 500+ employees.
- Operational process digitalization: replaced paper-based electrical-tool registration and authorization with a digital workflow for tool selection, employee signatures, and email confirmations.

SELECTED PERSONAL PROJECTS

Document Knowledge Agent: Node.js/Express/TypeScript gateway and Python/FastAPI core; Docker Compose, Vitest/Supertest, and an AWS architecture using Lambda, API Gateway, S3/CloudFront, Aurora pgvector, and Terraform. **Project:** Live | **Repository:** GitHub

Cloud Operations Lab: Terraform-defined AWS infrastructure with EC2, IAM, SSM, and CloudWatch/SNS; GitHub Actions CI/CD using OIDC, pull-request plans, and manual approval. **Project:** Live | **Repository:** GitHub

SkillTracker: Full-stack application with a Go REST API, React, PostgreSQL, and Docker Compose, deployed across Vercel, Render, and Neon. **Project:** Live | **Repository:** GitHub

ECG-AI Serverless: Python classifier with 75.6% balanced accuracy, deployed through Lambda Function URL with S3, IAM, CloudWatch, and Terraform. **Project:** Live | **Repository:** GitHub

TECHNICAL SKILLS

Software and Data: Python, Go, TypeScript/JavaScript, Node.js, Express, FastAPI, REST APIs, SQL/PostgreSQL

Cloud and Infrastructure: AWS (Lambda, API Gateway, S3, EC2, IAM, VPC, CloudWatch, SSM, SNS, DynamoDB, Aurora, CloudFront, ECR), Terraform, Docker, Linux, Bash

Delivery and Quality: Git/GitHub, GitHub Actions, OIDC, CI/CD, React, Next.js, Vitest, Supertest
